

Living with HIV today

The management of human immunodeficiency virus (HIV) now includes a focus on healthy aging. For many, it's more about managing the side effects associated with HIV and its treatment, including HIV-related excess belly fat.

Join us to learn more about HIV-related excess belly fat and its management.

Title: Living with HIV today: Understanding HIV-related excess belly fat

Presented by: Nurse educators

Details: This is a 20- to 25-minute presentation to inform patients about why some people living with HIV will have excess belly fat and the related health consequences

Contact us: If you would like a nurse educator to present to patients, please send a request to:
